

# Bot Construction

*An Oakville based heavy civil engineering and construction company, known for its capability, experience and commitment to excellence.*

If your drive or ride the highways of Ontario and beyond, you will most likely arrive at your destination via a road, an expressway, a bridge, an overpass or interchange proudly built by Bot Construction.

Today, Bot Construction is a well known, privately owned provider of heavy civil engineering and construction services, with numerous highway projects underway. The company has earned the reputation of being a quality builder. It has the in-house engineering and construction expertise, equipment support and project management capability to take on the most complex highway and public infrastructure projects.

From the Department of National Defense short range radar stations in the North West Territories, to the massive Quebec Hydro LaGrande project at James Bay, to the bridges at Terminals One, Two and Three at Pearson Airport, these structures that support our communities and connect us together are witness to the company's capability, experience and commitment to excellence.

Residents and travelers through the Greater Toronto Area will be familiar with the many segments of Ontario's 400 series highways built by Bot. These include the Burlington West section of Highway 407 and major interchanges at Highways 407/400 and Highways 410/401 – the highest and longest post tension structure in Ontario. Commuters are now enjoying shorter travel time by making use of the new HOV lanes on Highway 403, another Ministry of Transportation (MTO) project recently completed by Bot. For business and leisure travelers, the widening of the QEW at Niagara, now underway, will improve traffic flow through the Region and to the Canada/US border. And beyond, whether by way of Highway 417 that ribbons through

Bridges for outbound traffic to Hwy 409 at Pearson Airport, Toronto. Bridges built by Bot Construction.

Eastern Ontario or the busy and expanding Highways 11 and 69 routes into northern Ontario, Bot plays a role in creating our transportation history.

As a family owned and operated business, BOT is a true entrepreneurial success story. Sons Roy and Steve, both professional engineers, and sister Nancy, carry on the traditions of hard work, determination and exactness that they learned from their father and founder, Silvio Bot. Founded in Oakville in 1957, as a small curb and gutter operation, Bot Construction is celebrating its 50th year in business this year.

The communities of Oakville and the Halton Region are an important part of the company's

history and home to the skilled trades critical to the company's early development. Bot takes pride in its dedicated employees, a good number of whom have been with the company for more than twenty years. For the company, meeting its mission of being the best road builder means having the best people, the right mix of people and the right mix of skills.

With 85 full-time and a seasonal average of 300 employees operation wide, the Head Office of Bot is located on Speers Road in Oakville, where its orange trucks and distinct logo have an unmistakable presence.
